

HT-350 Rotary valve

HT-350 Rotary valves are used for transferring dry powders and granulates out of filter housings, cyclones, silos and hoppers. The rotary valves can also be used for discharging dry, powdered or granulated products from a storage hopper or silo into a mixer, grinding mill, conveyor screw, dryer or cooler or, in some cases, for discharging into a pneumatic transport system. In most of the above-mentioned applications, besides serving as a discharging component, the HT-350 rotary valves also function as an air lock, to maintain a certain pressure differential in the system. The versions with Vulkollan rotorblades are suitable for use with product temperatures up to 60°C, the versions with metal rotorblades up to 80°C and the heat resistant versions up to 200°C. Depending on the choice of drive system the rotary valve is suitable for use in an ambient temperature up to 40°C.

HT-350 Rotary valve

FEATURES STANDARD VERSION

- Body and covers** : Cast iron GG25
- In- and outlet** : Ø = 340 mm
- Rotorconstruction** : Open, with 6 or 8 chambers
- Driveunit** : Direct, with flexible coupling and gearmotor NORD 0,37 kW
230/400V, 50 Hz
IP55, iso F
- Rotation speed** : 31 rpm
- Finishing** : - In- and outlet painted in color RAL 3020 (red)
- Body, covers and motorconsole painted in color RAL 5009 (blue)
- Other RAL colors available at surcharge
- Sealing** : 6 Plastic blades, thickness 3 mm: feltring and sealing.
6 Springsteel of stainless steel blades: feltring, bronze bush and sealing
8 Polyurethane blades, thickness 4 mm: bronze bush and sealing, no feltring. Rotor: heavy duty welded version.
- Bearings** : Sintered bronze bearings, self-lubucating
- Max. operating pressure** : 5.000 Pa (500 mmWK), with 8 blades: 10.000 Pa (1.000 mmWK)
- Temperature** : -15° up to 60°C (with Stainless steel- en Springsteel blades: up to 80°C)
- Capacity** : ca. 20 liter / rev (100% filling)

ROTORS

	
Steel 37 / Nylon	Steel 37 / Vulkollan 3 mm
	
Steel 37 / Springsteel	Stainless steel 304 / Vulkollan 3 mm
	
Stainless steel 304 / Stainless steel 304	S355 / Vulkollan 4 mm / 8 blades

PROFILE

HT-350 Rotary valve

OPTIONS

						
Gearmotors	Different color					
						
Blades	Chromium plating	Chemically nickel plated	Revolution control	Operating switch	Gasket & flange	Isolation
